## Moshon Data Vehicle Target

low cost version of the Euro NCAP EVT  
Robust |  
Foam Core

### Moshon Data Vehicle Target

The MD-VT F is a lower cost, foam core version of the official Euro NCAP Vehicle Target (EVT). It is designed to the same specifications as the Euro NCAP target and is intended as a robust solution for development work and manufacturing test facilities.

Being a cheaper substitute for the EVT means vehicle manufacturers can purchase multiple vehicle targets and increase the number of tests.

### Low cost - same specifications

The lower cost Vehicle Target has the same specifications as the official Euro NCAP Vehicle Target and uses a digitally printed exterior cover, ECE104 Standard LIDAR reflective material and Energy Shield Radar reflective material for radar detection.
