Use in Tension and /or Compression for Force and Load Measurement

The DBB series of S-Beam load cells are designed for use in tension and compression and lend themselves to both force measurement and weighing applications alike.

There are three versions available covering the standard range which are the DBBE, DBBW and the DBBWAS. The DBBE is a dual bending beam design sealed to IP67 covering ranges from 50kg to 1000kg, the DBBW is a shear web design covering ranges of 0-500kg and 0-5000kg, fully welded and sealed to IP68 and the DBBWAS is a lower cost alloy steel version of the DBBW covering capacities from 1500kg to 5000kg.

Both the dual bending beam and the shear web design offer high accuracy performance of better than $\pm 0.03\%$ of the rated capacity.

Their ease of mounting makes them very attractive for use as a general purpose load cell.
