

## XS-D SERIES

### High stroke-to-length ratio LVDT

#### SPECIFICATIONS

- ◆ Excellent stroke-to-length ratio
- ◆ Lower weights than other standard LVDTs with comparable displacement ranges
- ◆ Stroke ranges from  $\pm 1$  to  $\pm 10$  inches
- ◆ Shock and vibration tolerant
- ◆ Stainless steel housing
- ◆ Magnetically shielded
- ◆ Imperial or metric threaded core

The XS-D Series LVDTs are specifically designed for measuring relatively large displacements where installation space is limited. The XS-D Series have a substantially greater displacement range than other standard LVDTs, but without the accompanying increase in body length and weight. Using special coil winding techniques, the XS-D permits linear range measurements of up to 80% of the housing length.

Compact, shock and vibration tolerant, and featuring infinite resolution and repeatability, the XS-D Series are the perfect choice for servo mechanisms, linear potentiometer replacement, or wherever precise displacement measurements are required in space restrictive applications. All models are supplied with a calibration certificate, and are available with either an imperial or metric threaded core. The XS-D Series are compatible with all Measurement Specialties LVDT signal conditioners, controllers and readouts.

Like in most of our LVDTs, the XS-D windings are vacuum impregnated with a specially formulated, high temperature, flexible resin, and the coil assembly is potted inside its housing with a two-component epoxy. This provides excellent protection against hostile environments such as high humidity, vibration and shock.

#### FEATURES

- ◆ Superior stroke-to-length ratio
- ◆ Stroke ranges from  $\pm 1$  to  $\pm 10$  inches
- ◆ Smooth transfer function
- ◆ AISI 400 Series stainless steel housing
- ◆ Calibration certificate supplied with all units

#### APPLICATIONS

- ◆ Servo mechanisms
- ◆ Hydraulic actuators
- ◆ Linear potentiometer replacement
- ◆ Space restrictive installations
- ◆ Weight sensitive applications
